Practical exercises such as

Use Python for practical labs for Machine Learning. Utilize publicly available datasets from repositories like https://data.gov.in/ and https://archive.ics.uci.edu/ml/datasets.php

For evaluation of the regression/classification models, perform experiments as follows:

• Scale/Normalize the data • Reduce dimension of the data with different feature selection techniques • Split datasets into training and test sets and evaluate the decision models • Perform k-cross-validation on datasets for evaluation

Report the efficacy of the machine learning models as follows: • MSE and R2 score for regression models • Accuracy, TP, TN, FP, TN, error, Recall, Specificity, F1-score, AUC for classification models

For relevant datasets make prediction models for the following

1. Naïve Bayes Classifier

2. Simple Linear Regression multiple linear regression

3. Polynomial Regression

4. Lasso and Ridge Regression

5. Logistic regression

6. Artificial Neural Network

7. k-NN classifier

8. Decision tree classification

9. SVM classification
