

## **BSc. Physical Sciences/ Mathematical Sciences with Computer Science as one of the Core disciplines**

### **CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE**

| Course title & Code                | Credits | Credit distribution of the course |          |                     | Eligibility criteria | Pre-requisite of the course (if any) |
|------------------------------------|---------|-----------------------------------|----------|---------------------|----------------------|--------------------------------------|
|                                    |         | Lecture                           | Tutorial | Practical/ Practice |                      |                                      |
| Programming fundamentals using C++ | 4       | 3                                 | 0        | 1                   | Class XII pass       | Nil                                  |

### **Learning Objectives**

The Learning Objectives of this course are as follows:

- Introduce programming concepts using C++ to students.
- Develop structured as well as object-oriented programming skills using C++ programming language.
- Achieve competence amongst its students to develop correct and efficient C++ programs to solve problems spanning multiple domains.

### **Learning outcomes**

This course will enable the students to:

- Write simple programs using built-in data types of C++.
- Implement arrays and user defined functions in C++.
- Write programs using dynamic memory allocation, handling external files, interrupts and exceptions.
- Solve problems spanning multiple domains using suitable programming constructs in C++.
- Solve problems spanning multiple domains using the concepts of object oriented programming in C++.

### **SYLLABUS OF DSC**

#### **Theory**

##### **Unit – 1**

**(3 hours)**

##### **Introduction to C++**

Need and characteristics of Object-Oriented Programming, Structure of a C++ Program (main () function, header files, output, input, comments), compile and execute a simple program

##### **Unit – 2**

**(12 hours)**

##### **Programming Fundamentals**

Data types, Variables, Operators, Expressions, Arrays, Keywords, Decision making constructs, Iteration, Type Casting, Input-output statements, Functions, Command Line Arguments/Parameters

**Unit – 3** (9 hours)

**Object Oriented Programming**

Concepts of Abstraction, Encapsulation. Creating Classes and objects, Modifiers and Access Control, Constructors, Destructors, Implementation of Inheritance and Polymorphism, Template functions and classes.

**Unit – 4** (9 hours)

**Pointers and References**

Static and dynamic memory allocation, Pointer and Reference Variables, Implementing Runtime polymorphism using pointers and references.

**Unit – 5** (12 hours)

**Exception and File Handling**

Using try, catch, throw, throws and finally; Nested try, File I/O Basics, File Operations

**Practical** (30 hours)

**List of Practicals:**

1. Write a program to compute the sum of the first n terms of the following series:

$$S = 1 - 2^n + 3^n - 4^n + \dots$$

The number of terms n is to be taken from the user through the command line. If the command line argument is not found then prompt the user to enter the value of n.

2. Write a program to display the following pattern:

```
A
BA
CBA
DCBA
```

The number of rows n, is to be taken from the user.

3. Write a program to compute the factors of a given number using the default argument.
4. Write a menu driven program to perform the following operations on an array:
  - a. Find the minimum, maximum and average of the array elements
  - b. Search an element in the array using linear search
  - c. Search an element in the array using binary search (both iterative and recursive versions)
  - d. Display the address of every element of the array
5. Write a menu driven program to perform the following operations on a string:

- a. Calculate length of the string (use pointers)
  - b. Check whether the first character of every word in the string is in uppercase or not
  - c. Reverse the string
  - d. Display the address of every character in the string
6. Create a class Triangle. Include overloaded functions for calculating the area of a triangle.
7. Create a template class TwoDim which contains x and y coordinates. Define default constructor, parameterized constructor and void print() function to print the coordinates. Now reuse this class in ThreeDim adding a new dimension as z. Define the constructors and void print() in the subclass. Implement main() to show runtime polymorphism.
8. Copy the contents of one text file to another file and display the number of characters copied.

### **Essential Readings**

- Stephen Prata, C++ Primer Plus, 6th Edition, Pearson India, 2015.
- E Balaguruswamy, Object Oriented Programming with C++, 8th edition, McGraw-Hill Education, 2020.
- D.S. Malik, C++ Programming: From Problem Analysis to Program Design, 6th edition, Cengage Learning, 2013.

### **Suggestive Readings**

- Herbert Schildt, C++: The Complete Reference, 4th Edition, McGraw Hill, 2003.
- A. B. Forouzan, Richard F. Gilberg, Computer Science: A Structured Approach using C++, 2nd edition, Cengage Learning, 2010.

**Note:** Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.
